SMP's DNA, PROTOMEN, STRIDES
Haplotype, Haplogroup, Haplotype
(R-M173 - R-M412)
LEGEND
Dx Clark
Dx Alarcy
Two meanings, or illusions, except for Cu. Clarc were formed in 1252, indicative of these earlier times. Dx is for the purpose of geographical reference.
1-Chromosome mutations except for the group comprising L302 and its descendants this is generally the average number of years, based on the 25SD mutation, such time occurred.
NOTES
General Rules:
1 The tree is derived from a variety of differing sources and is not claimed to be absolutely correct. However, it is considered a suitable starlyplot for alignment with Y-chromosome test results. Note that:
Dates are indicative as they may vary from one source to another.
Generations are based on 25 years per generation pertinent to the McCarthy R-L21 Group B tree are no less likely to accommodate ancestors of present day MacCarthys. Thus a sizeable progeny suggested on this tree should not necessarily be equated with a similarly sized cousin Sept in Cork.
2 All SNPs cited are in Haplogroup R.
3 Except where indicated that a sept governed its own surnames, from the generation of Tadhg (Died 1124) and Cormac (Died 1138) all entries carried the Mac Carthaigh surname (or Irish or anglicised variants thereof).
Dates based on dates:
1 Generally relating to events and series from sources to source. May be one and the same as or Diarmeid Dorn
2 Generally relating to dates does not support creation of Sept Clans on the tree.
3 Other sources suggest that Cormac Flann or Domhnall Ruadh na Nóiskraath (Dornell Rua) had two sons named Diarmeid (Dermot) and from one come Sts MacFinghin MacCarthy of Ardfully (See M FT Butler (right) pp 145 and 146).
4 Fiontán Mac Carthaigh
5 Fiontán, Book of Ballymote.
6 Consistent pedigree from The Annals of the Four Masters, An Leabhar Muimhneach and Leabhar na nGenealach, but it would seem that one or more generations are missing here.
7 Based on the Book of Lecan, Book of Ballymote, Leabhar na nGenealach and Leabhar Mac Carthaigh Riabhach. Dates are based on the assumption that there are 25 years per generation. Dates are based on the assumption that there are 25 years per generation. Dates are based on the assumption that there are 25 years per generation

DEVELOPMENT OF Mac CARTHY SEPTS

FOR USE IN ALIGNING WRITTEN GENEALOGIES WITH Y-DNA TEST DATA FOR McCARTHY R-L21 GROUP 9 PARTICIPANTS IN THE McCARTHY SURNAME STUDY

Sheet 2 of 2 - Progeny of Domhnall Got Mac Cárthaigh (including Mac Carthaigh Riabhach / Reagh sept and its subdivisions)

For commentary, notes, legend and sources of genealogies see Sheet 1.
